Phagwara, Punjab, India

Summary

B.Tech CSE student (CGPA: 9.23) at Lovely Professional University with hands-on experience in AI/LLM application development and full-stack problem solving. Built production-oriented agentic systems with RAG pipelines, LangGraph orchestration, and OCR during an Infosys Springboard internship; ranked **top 4 of 20** and selected to present the final prototype.

Skills

Languages: Python, C, C++, Java, JavaScript, SQL, HTML/CSS

AI/ML & LLM: LangChain, LangGraph, RAG Pipelines, Agentic Workflows, Prompt Engineering, asyncio

Data & Libraries: NumPy, Pandas, scikit-learn, Matplotlib, Seaborn

Tools & Platforms: Streamlit, Pinecone, PyPDF2, Git/GitHub, MySQL, Linux

CS Fundamentals: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks

Experience

AI/LLM Application Development Intern – Infosys Springboard 6.0 (Batch 11) Virtual | 8 Weeks, 2025

Project-Based Internship

- Architected and delivered **ClauseAI**, a multimodal legal contract analyser supporting PDF, DOCX, and TXT ingestion with OCR fallback for scanned documents and multilingual report output.
- Designed a **LangGraph multi-agent orchestration layer** with four specialised agents (compliance, finance, legal, operations) for structured parallel analysis across document types.
- Engineered a **RAG pipeline** using Pinecone with semantic chunking, improving retrieval precision for clause extraction and Q&A.
- Onboarded to a constrained pre-approved tech stack and closed the skill gap within one week; later diagnosed a critical Gemini SDK breaking change, patched the integration, and restored full pipeline functionality.
- Ranked **top 4 of 20 within the team**; selected by the mentor to present the final ClauseAI prototype, owning the pipeline from ingestion and retrieval to UI and report generation.

Projects

ClauseAI – Multi-Agent Legal Contract Analyser | Python, LangGraph, LangChain, Gemini 2.5 Pro, Pinecone 2025

- Built a **4-agent agentic pipeline** powered by **Gemini 2.5 Pro** to extract, summarise, risk-flag, and generate domain-wise insights from legal contracts.
- Implemented **semantic chunking and vector retrieval** over Pinecone and delivered a Streamlit UI with multilingual report export and OCR support for scanned contracts.
- Shaped the workflow into a practical contract-analysis tool that reduced manual clause review and made document understanding more structured and accessible.

AI Micro Investing Assistant | Python, FastAPI, scikit-learn, Next.js 2026

- Built an educational micro-investing assistant using **K-Means clustering** on **20,000 Indian personal finance profiles** to classify users into **5 financial states** and generate beginner-friendly guidance.
- Implemented a **0–100 financial health score**, goal-based allocation, SIP projections, and **multi-model AI explanations** via NVIDIA NIM API, with compliance guardrails to keep recommendations educational.
- Exposed the workflow through a FastAPI backend and Next.js interface, combining machine learning and rule-based financial constraints with AI-assisted explanations for first-time investors.

Education

Lovely Professional University

B.Tech – Computer Science and Engineering

Jawahar Navodaya Vidyalaya, Anand, Gujarat
